3D - Bioprinting

Kang et al. Nature Biotechnology, 2015

- **Layer by layer printing**
- Resolution: 20-100um (depends on the material)
- **Scaffold** materials (e.g. hydrogel, ...)
- **Sacrificial** material (e.g. sucrose, pluronic,...)
- **Biological** material (cell line, primary cells)

Regenhu 3D Bioprinter available at ARTORG with 3 printheads:

- Dispenser – Dosing directly out of cartridges (cells, hydrogels,...)
- Thermo polymer Extruder (PS, hard plastics)
- Microvalve printhead for accurate jetting or contact dispensing (hydrogels, cells)

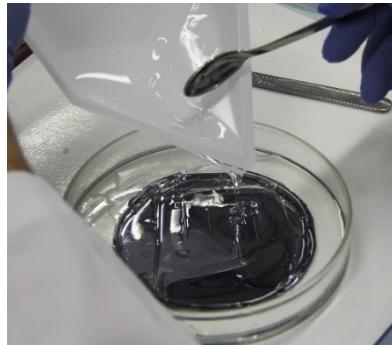

Other rapid prototyping technologies

Spin Coating

3D Bioprinting & Organs-on-Chip Technologies

- Technologies to create **microstructures with dimensions similar to those of cells**
- Possibility **to accurately reproduce** the cellular microenvironment (small quantity of liquids, small number of cells)

In vitro vasculogenesis

Bichsel et al. 2015

Endothelial cells and pericytes
in a fibrin environment

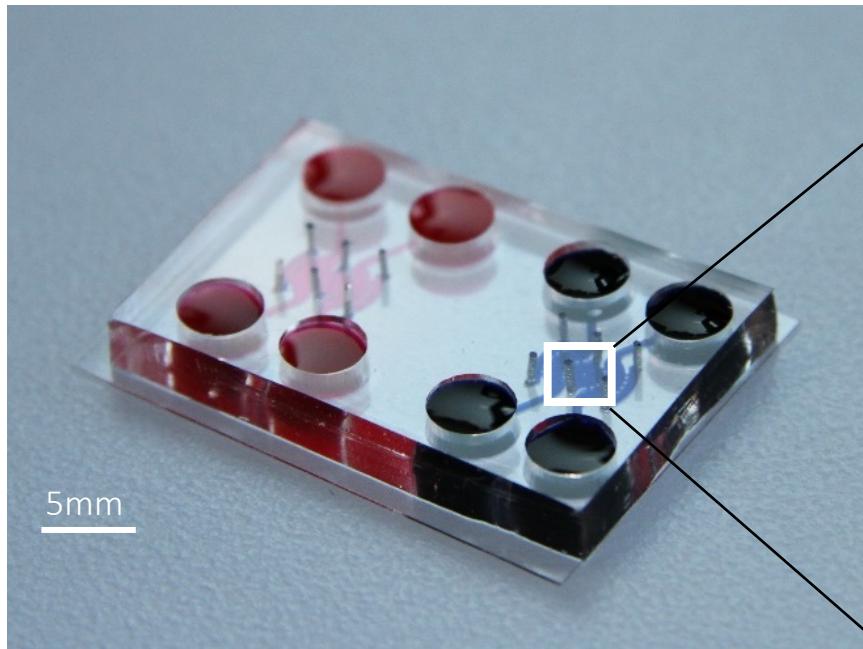

Bichsel et al. 2015

In vitro vasculogenesis

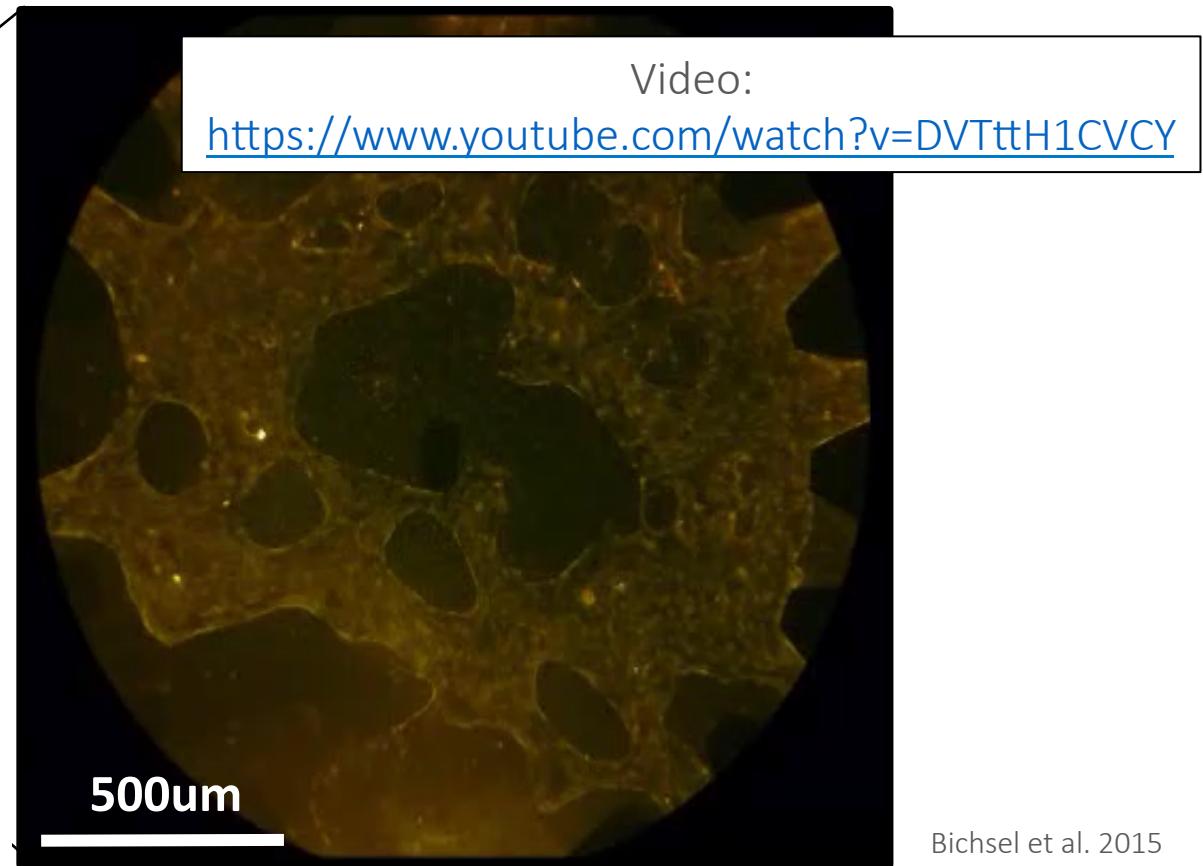

Collaboration:

- Pulmonary Medicine Department, Prof. Th. Geiser
- Thoracic Surgery Department, Prof. R. Schmid

Bichsel et al. 2015

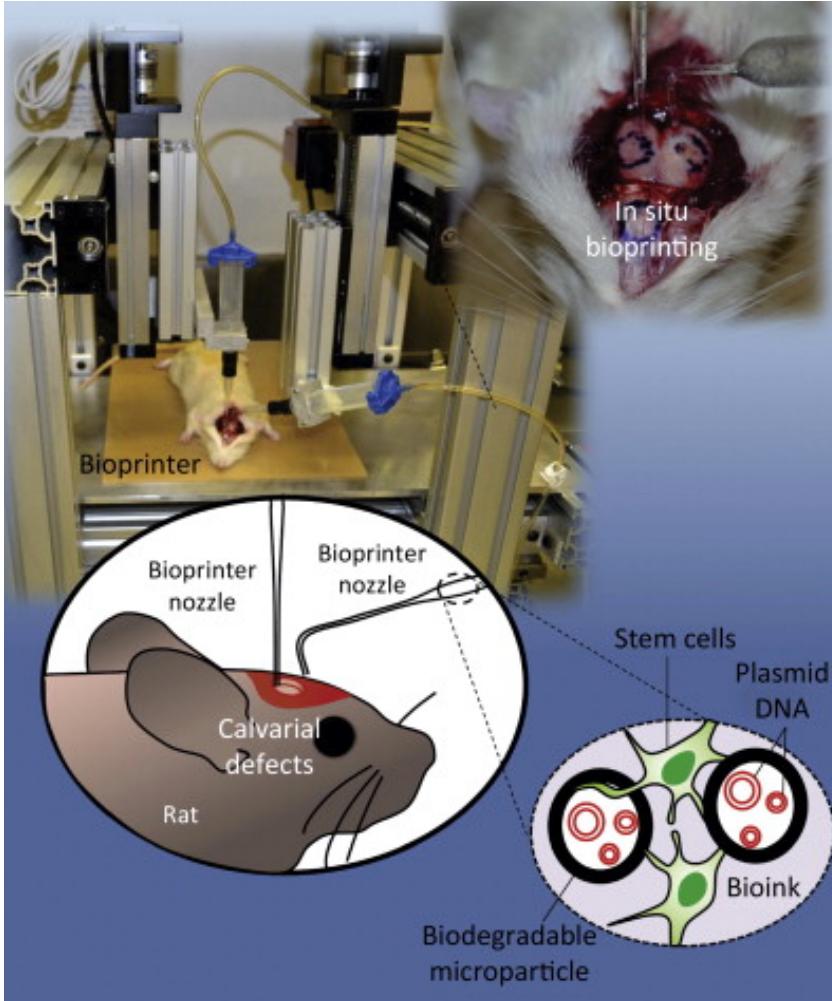

Perfusible and functional
(vasoconstrictive) lung microvasculature

Bichsel et al. 2015

Future: in-situ bioprinting!

Ozbolat, Trends in Biotechnology (2015)

Possible applications

- Extremities injuries
- Crano-facial defects (picture left)

Challenges

- Material: which bioink?
- Cell sources: primary, iPS cells, ...
- Vascularised tissues
- Tissue innervation
